packchain

PACKAGING OPTIMIZATION

" Our packaging delivers perfect doors, and now we have 4K proof of it.

A top five American cabinetry company builds high-end cabinet doors that cost over $500 each. Its optimized door pack design already ships doors damage free. But the company still fielded hundreds of damage claims per month, with no way to prove condition at ship time.

IQpack rebuilt the door pack workflow around **packchain** and a one-piece flow integrated with the plant's **Packsize** machines. Every pack is now recorded in 4K video from multiple angles. The software ties each video to its Order Number and stores it for instant retrieval.

Now the company has clear proof of the color, size, and condition of every door before it ships. Packers scan and pack inside the existing workflow, so throughput went up.

We audited 125,000 shipments and found packers had made only 13 real mistakes. That proves 99.99% packing quality and confirms the optimized pack design ships doors damage free. The company can defend against false claims instead of paying for them.
